

Environmental Services

Balanced Solutions

Czop/Specter's Environmental Division specializes in providing consulting services to help ensure that projects planned to serve the public consider and address environmental impacts, as well as cultural and historical concerns. This includes ensuring that planned projects conform to all federal, state, county, municipal, and other requirements, such as:

- The National Environmental Policy Act (NEPA)
- National Pollutant Discharge Elimination System (NPDES) Regulations
- National Historic Preservation Act (NHPA), Section 106
- Federal Highway Administration (FHWA), Section 4 (f)

We have successfully completed many public projects including roadways and bridges, streetscaping, pedestrian and bike trails, parks, Safe Routes to School, stormwater management, water/wastewater systems, transportation enhancement, and other community infrastructure projects.

Our environmental professionals keep projects on track and on time by completing all the requirements associated with environmental, cultural and historical considerations. They conduct environmental studies required to prepare all necessary documentation, as well as obtain required clearances, approvals, and permits. In addition to public sector projects, our services extend to private institutions, developers, and commercial and industrial clients. This work involves significant coordination and collaboration with multiple agencies including:

- Pennsylvania Department of Transportation (PennDOT)
- Federal Highway Administration (FHWA)
- Department of Community & Economic Development (DCED)
- Pennsylvania Department of Environmental Protection (PADEP)
- Department of Conservation & Natural Resources (DCNR)
- Delaware Valley Regional Planning Commission (DVRPC)
- Susquehanna River Basin Commission (SRBC)
- and many other entities
