Site Development Leaders Since 1983

Developing a site for natural gas drilling in Marcellus Shale deposits presents many challenges. Whether navigating the complex approval and permitting process, designing around unique site conditions, or meeting a tight project budget and timeframe, Czop/Specter provides a range of integrated engineering solutions overcoming these challenges.

Czop/Specter offers 26 years of Site Development, Environmental Services, and Surveying experience. Specific ways we can help to expedite the permitting, engineering and planning process include:

- Complete Site Development, Engineering & Planning
- Obtaining all necessary permits and approvals in the shortest time frame from PADEP, DRBC, SRBC, Pennsylvania Fish & Boat Commission, municipalities, and other entities
- Reviewing topographical data to determine well locations
- Best Management Practices (BMP)
- Acid Mine Drainage
- Dams & Impoundments
- Performing all survey, mapping, and environmental fieldwork
- Erosion & Sediment Control & Stormwater Management
- Fracture Water & Flowback Treatment
- Water Supply Evaluation / Transmission / Conveyance / Logistics Support
- Environmental Management & Investigation
- Seeding & Stabilization

Czop/Specter can mobilize to the entire Marcellus Shale region.
